

LISTING OF THE CLAIMS

Please add Claims 24 and 25. Please amend Claims 1, 9, and 23, as follows:

1. **(Currently Amended)** A method in a computer system for generating a display page, the method comprising:
 - receiving a request to generate a display page, wherein
 - the display page comprises realtime information and non-realtime information,
 - realtime information comprises information capable of being retrieved or generated without significant delay, and
 - non-realtime information comprises information for which retrieval or generation will result in significant delay;
 - retrieving the realtime information to be included on the requested display page;
 - if a previously cached version of the non-realtime information is available,
 - generating the requested display page comprising the retrieved realtime information and the previously cached non-realtime information; and
 - if a previously cached version of the non-realtime information is not available,
 - generating the requested display page comprising the retrieved realtime information and an indication that the non-realtime information is not yet ready for display, wherein the indication that the non-realtime information is not yet ready for display is provided in a ~~[[the]]~~ location in which the non-realtime information is to be displayed,
 - requesting generation of the non-realtime information,
 - caching the generated non-realtime information, and
 - generating the requested display page comprising the retrieved realtime information and the cached non-realtime information in response to a subsequent request for the requested display page.

2. (Previously Presented) The method of claim 1 wherein said generating the requested display page comprising an indication that the non-realtime information is not yet ready for display further comprises:

including a link for requesting the display page.

3. (Previously Presented) The method of claim 1 wherein the request to generate the display page is received from a user.

4. (Previously Presented) The method of claim 1 wherein the request to generate the display page is received when a user logs on to one of the computer system and a client coupled to the computer system.

5. (Original) The method of claim 4 wherein the display page is a homepage.

6-7. (Canceled)

8. (Original) The method of claim 1 wherein the generated information includes a graphical representation of information.

9. (Currently Amended) A computer system for generating a display page of business information, comprising:

a component configured to retrieve realtime business information to be included on the display page;

a component configured to request performance of a computation to generate non-realtime business information to be included on the display page and to cache the generated non-realtime business information;

a component configured to,

if a cached version of the non-realtime business information is available,
generate the display page comprising the realtime business
information and the cached non-realtime business information, and
if a cached version of the non-realtime business information is not
available,

generate the requested display page comprising the retrieved
 realtime information and an indication that the non-realtime
 information is not yet ready for display, wherein the
 indication that the non-realtime information is not yet ready
 for display is provided in a ~~[[the]]~~ location in which the
 non-realtime information is to be displayed,
 request generation of the non-realtime information,
 cache the generated non-realtime information, and
 generate the requested display page comprising the retrieved
 realtime information and the cached non-realtime
 information in response to a subsequent request for the
 requested display page; and
 a component configured to send to a user computer system the display page for
 display to a user so that the user can view the realtime information if the
 non-realtime business information is not yet ready.

10. (Previously Presented) The computer system of claim 9 wherein the
 component configured to generating the requested display page comprising an indication
 that the non-realtime information is not yet ready for display is further configured to
 include a link for requesting the display page.

11. (Previously Presented) The computer system of claim 9 wherein a request
 to generate the display page is received from a user.

12. (Previously Presented) The computer system of claim 9 wherein a request
 to generate the display page is received when a user logs on to one of the computer
 system and a client coupled to the computer system.

13. (Original) The computer system of claim 12 wherein the display page is a
 homepage.

14-15. (Canceled)

16. (Original) The computer system of claim 9 wherein the generated business information includes a graphical representation of the business information.

17-21. (Canceled)

22. (Previously Presented) The method of Claim 1 further comprising:
if a previously cached version of the non-realtime information is available,
requesting re-generation of the non-realtime information subsequent to
said generating the requested display page comprising the
previously cached non-realtime information,
caching the re-generated non-realtime information, and
generating the requested display page comprising the retrieved realtime
information and the cached re-generated non-realtime information
in response to a subsequent request for the requested display page.

23. (Currently Amended) A computer-readable storage medium comprising program instructions executable to:

receive a request to generate a display page, wherein
the display page comprises realtime information and non-realtime
information,
realtime information comprises information capable of being retrieved or
generated without significant delay, and
non-realtime information comprises information for which retrieval or
generation will result in significant delay;
retrieve the realtime information to be included on the requested display page;
if a previously cached version of the non-realtime information is available,
generate the requested display page comprising the retrieved realtime
information and the previously cached non-realtime information; and
if a previously cached version of the non-realtime information is not available,
generate the requested display page comprising the retrieved realtime
information and an indication that the non-realtime information is
not yet ready for display, wherein the indication that the non-
realtime information is not yet ready for display is provided in a

[[the]] location in which the non-realtime information is to be displayed,
request generation of the non-realtime information,
cache the generated non-realtime information, and
generate the requested display page comprising the retrieved realtime information and the cached non-realtime information in response to a subsequent request for the requested display page.

24. (New) The method of claim 1 wherein a significant delay comprises a delay of one second or more.

25. (New) The method of claim 1 further comprising:
retrieving selected information used to generate a portion of the display page; and
regenerating the display page comprising the realtime information, the non-realtime information and the selected information in response to a request related to such selected information.
